

week6

Jiajun Li

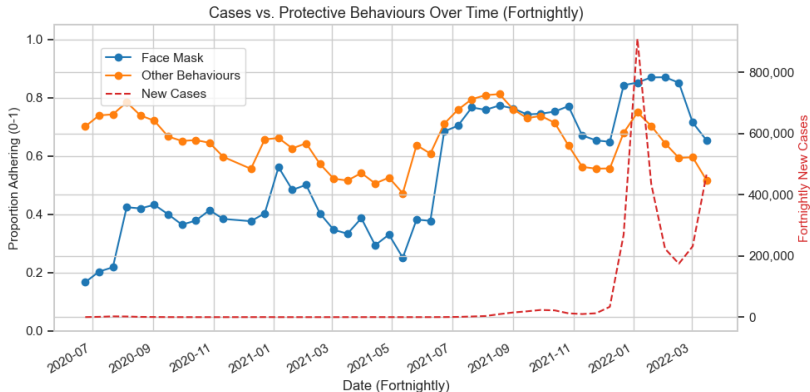

2026-07-05

What I did

- Presentation
- Some basic model tuning and comparisons
- Some plots works

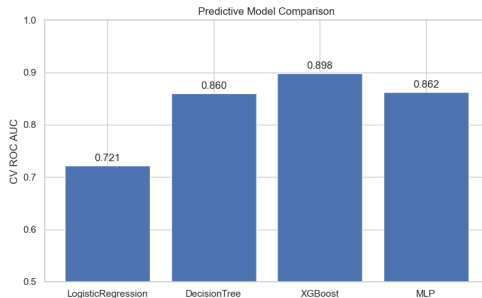

COVID-19 cases VS. protective behaviors

- Protective behaviours may track with new case number during specific periods.

Result of initial model comparisons

- Logistic Regression performed the worst.
- MLP performed only slightly better than the Decision Tree.
- The best-performing model was XGBoost.

Plan for next week

- Conduct better model tuning
- Investigate feature importance
- Report

Question

- Results suggest that MLP does not perform as well as XGBoost on this dataset, is this acceptable?
