

How to include references

Your name

2026-03-18

Setup

You need a `*.bib` file, then you include it in the YAML header. These are called **BibTeX** files. Here I've made one called `TestBibFile.bib`.

What goes in your BibTeX file

See the `TestBibFile.bib` file itself to get more details, but basically you need

```
@<type>{<reference name>,  
author = {<author name>},  
year = {<year of publication>}  
}
```

The `<type>` can be lots of different things (the list is here <https://www.bibtex.com/e/entry-types/>), but the most common ones are

- `@book`
- `@article`
- `@inproceedings`
- `@misc` (for webpages)

Then you cite a reference by using `[@<reference name>, <page range>]`, eg. (Guo, Xiang, and Wang 2023, 12071–83) # How to generate the bibliography

Your bibliography will be automatically generated from all the citations you include. Just put the code `<div id="refs"></div>` after your References title. See below.
